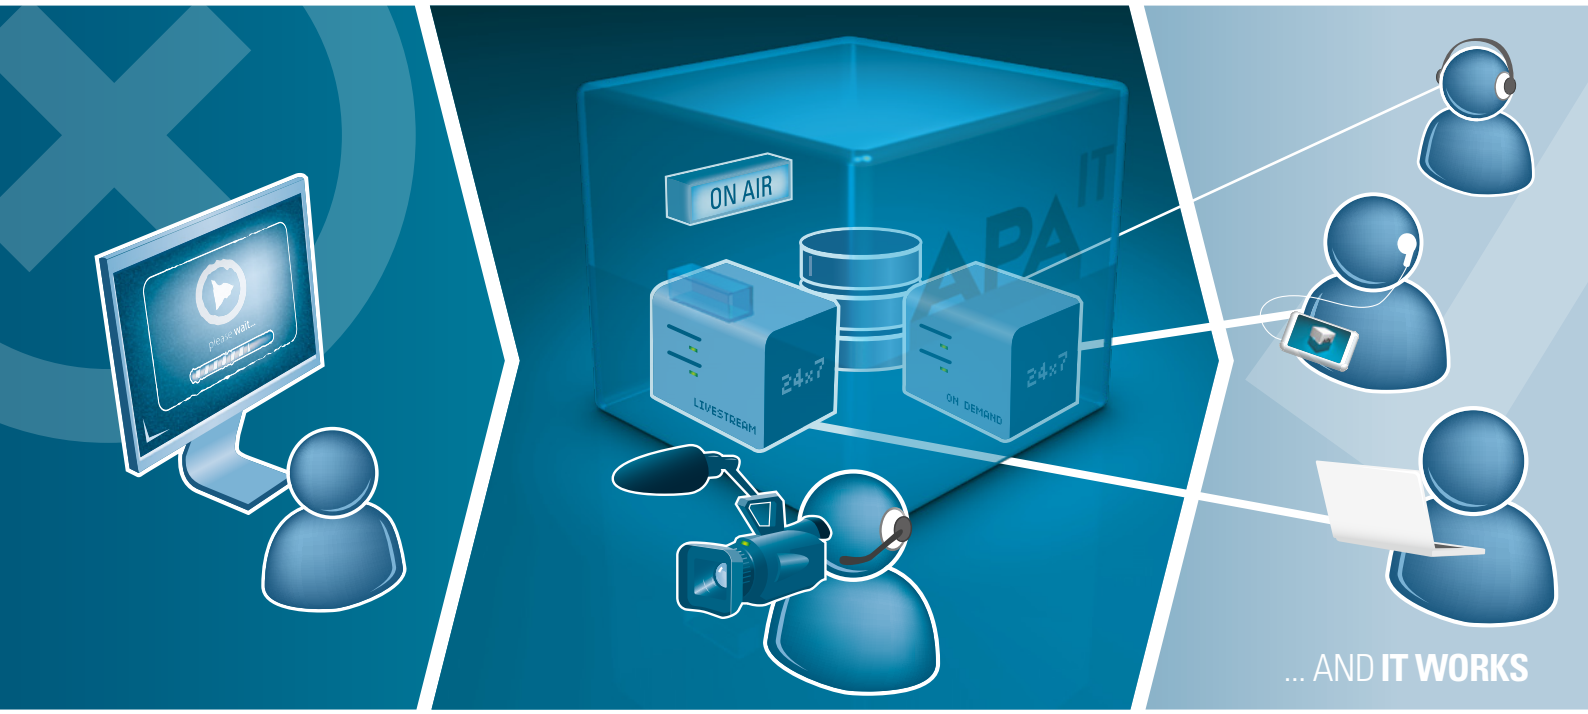
STREAMING

LIVE AND ON DEMAND – MORE AND MORE PEOPLE WANT TO PARTICIPATE IN SPORTS OR OTHER EVENTS, EVEN IF THERE IS NO TELEVISION OR RADIO NEARBY. WITH SMARTPHONES AND LAPTOPS USERS RETRIEVE VIDEOS FROM THE INTERNET INDEPENDENT OF TIME AND PLACE. APA-IT OPERATES AUSTRIA'S LARGEST STREAMING PLATFORM, WHICH ALSO FUNCTIONS STABLY AT MAJOR MEDIA EVENTS, THUS STREAMING EVENTS OR ENTIRE PROGRAMMES IN THE WEB.



HOW DOES IT WORK?

There is an event which you would like to have all those interested participate in on your website. You provide the images of the event; APA-IT handles the broadcasting in the internet.

APA-IT ensures your video signal is recorded on the server and can be accessed as a live stream in the internet. Now your website's users can attend the event live. And those who have no time at the moment can view the stream afterward on demand.

Of course the streaming platform is also suitable for pure audio data.

STREAMING WITH APA-IT

APA-IT operates Austria's most powerful streaming platform. At up to 10 Gbit/s, 25,000 users can access it simultaneously without a problem; this corresponds to about 30 percent of Austrian internet traffic. Thus the platform is equipped for large public events. With a personal team APA-IT accompanies you from the idea through development to the optimal streaming platform for your needs.
